

2025 Performance & Career Conversation

Accomplishments & Motivation

1. Since your last performance review (or since joining the company), what achievements are you most proud of?
 - Writing Java code to run an SQL query to pull data from the database. And then working to integrate that code into an AWS Lambda function. And finally, configuring the Lambda function be used as a trigger to display data in Salesforce.
 - Learning Angular and Material Angular to create and modify web forms and implement new components in the web portal.
 - Being able to navigate around Salesforce well enough to able modify objects and tables.
2. What motivates you to perform at your best and stay productive?
 - What motivates me is the challenge to research and learn new things and to apply what I learn to the project.
 - Creating and designing new web applications.

Goals & Progress

3. Which goals have you successfully achieved, and which remain in progress or unmet?
 - I achieved building and implementing an AWS Lambda function
 - I achieved learning and implementing Angular components.
 - I am still working toward my Salesforce certifications.
4. What key outcomes or milestones do you aim to accomplish before the next performance review?
 - Passing at least one of the Salesforce certification tests.
 - Getting more familiar with AWS.

Work Experience & Engagement

5. What changes or improvements could make your role more engaging and enjoyable?
 - Currently, I cannot identify any changes I would need. The work is challenging, and the environment encourages asking questions.

Growth & Development

6. Which skills, knowledge areas, or competencies do you want to focus on developing in the coming period?
 - I would be focusing on:
 - Studying Salesforce
 - Angular and Material Angular
 - Learning more about AWS
7. What support, resources, or opportunities would help you grow professionally?

- I was considering pursuing advanced training or certifications in Salesforce development, Angular best practices, and AWS architecture. This would help deepen my technical skills and ensure I stay aligned with evolving industry standards.
